

25MM PGU-32/U

SEMI-ARMOR PIERCING HIGH EXPLOSIVE INCENDIARY-TRACER (SAPHEI-T)

The Improved 25mm cartridge, the PGU-32/U SAPHEI-T, was designed to provide aerial and surface gun platforms with improved effectiveness against soft and light armored targets.

The PGU-32/U incorporates the basic multipurpose technology providing: inherent detonation delay; improved graze sensitivity; and light armor capability. All of these features give these platforms improved capability on target over the current inventory 25mm HEI ammunition.

The PGU-32/U replaces the PGU-25/B HEI and is fully interoperable in the NATO 25mm gun systems. The PGU-32/U is a ballistic match to the PGU-20/U API and the newly developed PGU-33/U Target Practice Frangible-Tracer (TPF-T).

The PGU-32/U SAPHEI-T is type classified for service use in the AV-8/B Harrier and the MK38 Navy platforms. The cartridge is fully interoperable in the Marine Corps LAV-AD, LAV-25 and the Army Bradley Fighting Vehicle.

25MM PGU-32/U SAPHEI-T

IMPROVED EFFECTIVENESS ON TARGET OVER THE STANDARD
25MM HEI AMMUNITION

UNIQUE FEATURES

- Ballistic Match to PGU-20/U API, PGU-33/ TPF-T and Conventional 25mm Ammunition
- Light Armor Capability
- Inherent Delay Function for Improved Terminal Effectiveness
- Improved Graze Sensitivity

The penetration of the 19mm RHA plate by the PGU-32/U SAPHEI-T clearly demonstrates its advantages in comparison to the 25mm HEI.

The performance of the PGU-32/U against the plate array shows the advantage of its inherent delay function.
