

MAULER

MULTI-PURPOSE ASSAULT UTILITY LAUNCHER AND ENCASED ROCKET

General Dynamics Ordnance and Tactical Systems is the system integrator for the Multipurpose Assault Utility Launcher and Encased Rocket, a unique shoulder-launched 90mm weapon that provides a fire-from-enclosure capability for close and open-terrain engagements.

MAULER fulfills the U.S. Marine Corps requirement for the Follow On To Shoulder-launched Multipurpose Assault Weapon.

The weapon launches a family of free-flight projectiles, including a multipurpose round for defeating urban structures, earth and timber bunkers, and light armor.

MAULER is also available with a wall-breaching round to create mobility corridors during military operations. The common practice round provides a low-cost training round with an inert target-marking payload. The field-handling trainer is a completely inert round that provides functional simulations.

General Dynamics Ordnance and Tactical Systems is teamed with Rafael and Dynamit Nobel Defence to qualify and produce the MAULER system.
