Requirements

These parts are electrostatic discharge sensitive (esds). Consult the applicable part number specification for esds requirements including proper handling, packaging, and identification. Treat parts as Mil-Std-1686 class 1 devices in the absence of other specific requirements. Parts shall be packaged in conductive material or packaged in antistatic material with an external conductive field shielding barrier. The package shall be plainly marked with precautions against electrostatic discharge in addition to any packaging requirements called out by the drawing, specification or purchase order, the parts must be packaged in a way which prevents damage from movement inside the container.
