## Q3–Mil-Q-9858A Quality System Program

### Requirements

The Supplier's quality system shall comply with Mil-Q-9858A "quality program requirements". The Supplier's inspection system shall be subject to periodic and random audits and must be approved by a General Dynamics quality assurance representative. The Supplier shall accommodate General Dynamics quality system audits at all reasonable times for all shifts and locations in which articles are produced under this order. In lieu of the Mil-Q-9858 system requirement, the Supplier may elect to substitute an independent system certification to ISO9001, as an alternate.

Suppliers who wish to exercise this option, shall notify General Dynamics Supplier Quality by forwarding a copy of their current ISO certification. Note: Certification must be applicable to the facility where work on this contract will be performed. Unless otherwise specified in this order, Material Review Board (MRB) authority is not delegated to the Supplier. All decisions to "repair" or use-as-is and all "standard repair procedures" utilized by the Supplier in the performance of this order require purchaser approval prior to implementation. Expressions used herein are as defined in Mil-Std-1520.
